## On possibilities of National Airport Minsk

RUE “National Airport Minsk” presents its compliments and provides information on the company's capabilities in the field of freight forwarding logistics and international air transportation of goods and mail. Our work is aimed at increasing effectiveness of our customer’s foreign trade.

The Airport’s Transport and Logistics Center handles cargos according to the 3PL (Third Party Logistics) “door-to-door” standards, and provides services such as:

- handling, receipt, storage, forwarding, transportation (delivery) of cargos;
- customs procedures organization;
- phytosanitary and veterinary control.

Our enterprise operates around the clock (24 hours a day, 7 days a week).

Only European equipment by leading manufacturers is used for cargo handling, which allows to perform fast and effective unloading / loading operations of any aviation cargo volumes.

High-quality handling of goods is carried out in specialized storage areas and facilities for various categories of goods (general, dangerous, perishable, valuable goods).

Heat chambers with a temperature regime of + 2 ° C - + 8 ° C with a total volume of 239 m<sup>3</sup>, as well as heat chambers with a temperature regime of -30 ° C + 30 ° C with a total volume of 56 m<sup>3</sup> are used for handling cargos that require special temperature storage conditions.

In order to carry out efficient customs procedures, a customs clearance point operates daily at the Airport’s Transport and Logistics Center. It provides all the necessary customs procedures for cargos arriving at the airport by air or road.

RUE “National Airport Minsk” has been progressively developing cooperation with all aviation companies and is a direct agent of Belavia, Lufthansa, Transaviaexport, AirBaltic, Czech Airlines, etc., which makes it possible to offer

more advantageous logistics programs for air delivery of cargo to interested clients.

The advantages of RUE “National Airport Minsk”:

- the presence of highly qualified personnel with competence to handle cargo of any category (including valuable goods, dangerous goods, perishable goods, goods requiring special temperature conditions, transportation of live animals);
- technical capabilities for the high-quality handling of air freight;
- the high level of reputational and financial guarantees of qualitative services provision;
- comprehensive services provision (customs declaration, organization of phytosanitary and veterinary control, 3pl logistics with the delivery of goods to the recipient);

For customers who are interested in long term relationship, RUE “National Airport Minsk” is ready to organize the development of individual cooperation programs for developing foreign trade activity, including an individual discounts system for airport services.

For more detailed information on promising cooperation and contract conclusion procedures, you can contact us by e-mail [logist@airport.by](mailto:logist@airport.by).

We see it as a priority for RUE “National Airport Minsk” to build attractive conditions not only for the enterprises of the Republic of Belarus, but also for enterprises of foreign countries in the field of international air transportation.
