

Commercial proposal.

Vitebsk, Belarus

Dear Sirs,

Unitary Enterprise «Vitebskoblgas» is a compound, multidivisional and technically well-equipped company. Our enterprise was reorganized in 2007, three peat-extracting plants, which are situated in Dokshytsy, Chashniki and Shumilino areas of Vitebsk region, Belarus were incorporated in «Vitebskoblgas».

In 2011 a new plant for the production of nutritive substrates and peat moss was put into operation. The plant is equipped with modern high-tech machines produced by Premier Tech and Kruviks companies.

At present such products as peat moss packed in Big Bales, substrates, sod peat, composted peat are produced at these peat plants.

1. Peat moss packed in Big Bales (is used as the basis for the production of nutritive substrates or for the improvement of soil structure): Degree of decomposition – up to 20%, ash content — up to 10%, moisture content — up to 53%, acidity pH — 2,5-3,5 or 5,5-6,5; peat fractions – 0-7, 7-15, 15-30, 0-40; radioactivity — within the applied limits, wood inclusions — up to 1%, organic value – not less than 95%, HS code – 2703000000, volume of peat in a Big Bale — 4,5-6,0 cbm. Package: white plastic bags of 100 and 250 liters; Big Bale on the pallet covered with stretch film.
2. Substrats are produced on the basis of peat and the Dutch fertilizer «PGmix». They are used for growing seedlings of vegetables, flowers, trees and bushes, lawns and also for soil structure improvement. Composition: peat moss with 5,5-6,5 pH acidity, mineral fertilizers mg/100g of dry substance: Nitrogen (N) 170-270, Potassium (K2O) 200-340; Phosphorus (P2O5) 110-190 and complex of microelements (MN, MO, CU, FE, B, ZN). Package: plastic bags 5l, 10l, 20l, 55l, 100l, 250l, Big Bale.
3. Sod peat (is used for heating of homes and non-residential premises). Heat of combustion (calorie content) 3000-3400ccal/kg, moisture content — up to 45%, ash content — up to 5%, amount of small pieces of wood (less than 25mm) — up to 23%.
